

Solution Architect

Uptima is seeking a SaaS Solution Architect. This is an exciting opportunity for any candidate who wishes to join an organization that is ranked #1 in customer satisfaction by our customers and partners. Our teams fundamentally impact the success of the businesses we help, creating a rewarding work experience in a diverse work-hard, play-hard environment.

Uptima has grown from a 2-person startup to become a significant and well-respected international provider in the space via word-of-mouth, customer testimonials and the support of our partners. This is a position being created in support of our continued growth.

Your Background:

- Minimum 6-years experience as a team member of successful software project implementations related to SaaS, Quote-to-Cash, CPQ, CLM, Field Service or ERP.
- Recognized as a functional expert in these domain(s).
- Experience with common debugging tools (firebug, Chrome Developer).
- Advanced certifications by software vendor(s).
- Strong communication, interpersonal & presentation skills.
- Experience in hands on design, prototyping, development, configurations, testing and other implementation activities.
- Strong technical, analytical and problem-solving skills.

What you will be doing at Uptima:

- Perform hands-on solution design, solution architecture, architecture roadmaps, prototyping, proof-of-concept builds, and development tasks as required in support of current and new projects.
- Ensure solutions are scalable and meet overall business requirements.
- Actively work with teams in solution design and implementation.
- Guide technical team to deliver a flexible and scalable solution.
- Mentor and supervise developers.
- Participate in customer-facing pre-sales activities and internal initiatives as required.
- Create and/or contribute to technical and functional documentation such as detailed architectural and system design documents.
- Participate in project/sprint planning, status and review meetings.
- Participate in peer reviews and evaluate designs and project activities for compliance with applications design and development guidelines and standards.
- Identify problem areas and identify causes of problems and suggest actions for solving them.
- Drive innovation and integration of new technologies and methodologies into projects.

The Role:

- Full-time position reporting to the Practice Director.
- Work locations include: San Jose, CA, Salt Lake City, UT, Haifa or Tel Aviv Israel or London UK. Remote possible for exceptionally qualified candidates.
- Travel approximately 25%.
